

Virtual-WorkSpaces™
Changing the way the world works

Virtual-WorkSpaces™

My Virtual-Workspace

This is where you start your morning. You can view your appointments, tasks and get an overview of all of your projects at a glance.

Personal Items

Home sweet home! Manage your private day planner, personal notes, tasks and other items to which only you have access.

Projects

Organize your workflow, coordinate your team members, and easily manage multiple sub-projects simultaneously.

Conferences

Face-to-face from any place! Easy to use, desktop-to-desktop video conferencing with application sharing, whiteboard and much more.

Files

The File system provides a secure common storage area, allowing all project members access to recent changes, even if you are offline.

Viewer

The Viewer presents native files in your browser without the original application that created them. Supports over 250+ common 2D/3D, design, CAD, and business formats! Rotate, zoom, flip, and spin your documents while others watch remotely.

Calendar

A calendar for every project allows you and the team to schedule appointments, tasks, and conferences.

Contacts

Your Virtual-WorkSpace address book keeps contacts in projects, or your personal space, and allows you access them from anywhere.

Discussions

Spark team dialog with multi-threaded discussion forums. Discussions can be real-time or continued off-line and the thread provides an audit trail for team knowledge.

Notes

Write quick messages and memos, that are displayed in the main project area to remind yourself and team members of useful information.

Hot Items!

Get to new items *fast!* Lists **What's New?** and **What's Due?** in your WorkSpace with constant updating of recent items.

Tasks

Delegate! Manage personal and team task assignments across multiple projects. Sort and filter for group or personal assignments.

Bookmarks

Build a shared, virtual library of your teams' collected web resources, hot links, and favorite sites.

Sync with Microsoft® Outlook®

Give your existing workflow a collaborative boost by synchronizing your data between Virtual-WorkSpaces and your Outlook client.

Virtual-WorkSpaces™
Changing the way the world works

Virtual-WorkSpaces™ Feature Comparison

Most products that we have researched in the past provided only portions of “full collaboration”, whether this was in the form of file sharing across the Internet, or limited video conferencing. Virtual-WorkSpaces provides all these aspects of basic collaboration and *much* more.

VirtualDesign Network’s Virtual-WorkSpaces adds project management, calendaring, contact management, multi-point video conferencing, and shared file conferencing to round out the collaboration tools you need.
